

TRUE LOCK 1/3 Tubular Straight Plates are indicated for fractures of ulna, radius and fibula shaft.

Radius and ulna body fractures differ from other diaphyseal fractures due to the relationship between both bones and the fractures can affect the elbow and wrist joints. In adulthood, forearm fractures often require surgical treatment, as they are noticeably displaced and unstable.

9hole option between 4-12.

TRUE LOCK 1/3 Tubular Straight Plates are made of Ti6Al4V ELI material (ASTM F136).

TRUE LOCK 1/3 Tubular Straight Plates Features

Low plate-and-screw profile and rounded plate edges minimize potential for tendon and soft tissue irritation.

Locking the screw into the plate does not generate additional compression. Therefore, the periosteum will be protected and the blood supply to the bone preserved.

Kirschner wire holes accept Kirschner wires (up to 1.5 mm) to temporarily fix the plate to the bone, to temporarily reduce articular fragments, and to confirm the location of the plate, relative to the bone.

TRUE LOCK 1/3 Tubular Straight Plates Screws Info

Reference Number:	Hole Count:	Length (mm)
200-10010-004	4 hole	45
200-10010-005	5 hole	65
200-10010-006	6 hole	80
200-10010-007	7 hole	95
200-10010-008	8 hole	110
200-10010-009	9 hole	125
200-10010-010	10 hole	135
200-10010-011	11 hole	150
200-10010-012	12 hole	160
